

KIMENYI HONORE

Full-Stack Laravel & Vue Developer – ERP, Accounting & Inventory Systems
Kigali, Rwanda | +250 783 325 515 | honore.kimenyi@gmail.com | github.com/KIMHON1

PROFILE

Full-stack web developer specializing in enterprise resource planning (ERP) systems for businesses in Rwanda. I design and build modular, accounting-grade applications with Laravel and Vue, with a deep focus on double-entry accounting, inventory and stock costing, and financial reporting. I work end to end: domain and database modelling, backend business logic, journal-entry and ledger integrity, and reactive Vue interfaces. I care about correctness, maintainability, and matching established patterns so systems stay reliable as they grow.

TECHNICAL SKILLS

Backend: PHP, Laravel, nWidart/laravel-modules (modular monolith), Spatie laravel-permission, RESTful APIs; Python, Django

Frontend: Vue.js 2 (global components), Blade, Laravel Collective, AdminLTE, Bootstrap 5, Select2, jQuery

Data & reporting: MySQL, Eloquent ORM and relational data modelling, Yajra DataTables, Maatwebsite Excel, ReportLab (PDF), docx (document generation)

Domain expertise: Double-entry accounting, weighted-average costing, inventory and stock management, product variation systems, batch/lot and expiry tracking, payroll, VAT and withholding tax (RRA), financial reporting

Architecture & practices: Thin-controller / fat-model design, single authoritative save paths, transaction-safe accounting logic, pattern-driven development, automated testing, clear technical documentation

Environment & tooling: Git, Linux (Ubuntu), Composer, npm, Bash

SELECTED PROJECTS

Milmall-ES — Modular ERP Platform

A multi-module ERP built on Laravel (nWidart/laravel-modules) with Vue 2, AdminLTE / Bootstrap 5, and Spatie permissions, built around a full double-entry accounting core.

- Built a weighted-average costing engine wired into purchasing and point-of-sale, with correct COGS and inventory alignment and careful handling of negative-inventory and pre-tracking edge cases.
- Designed an Odoo-style product variation system (combinations, lines, and per-branch stock) with automatic SKU generation and journal posting on save.
- Implemented batch/lot and expiry tracking with FIFO plus manual override, expiry alerts, batch traceability on receipts, and blocking of expired-stock sales.
- Built a unified payment system with a single authoritative save path that auto-generates journal entries on confirmation and reversal entries on void or edit, integrated with Mobile Money and Irembo.
- Extended stock-adjustment accounting with dedicated gain and loss accounts, and built VAT-aware expense handling with inclusive-tax back-calculation.

BuildT — Construction Project Management System

A construction project management platform sharing the same Laravel and Vue stack.

- Authored the full technical specification: a 23-table schema, six user roles, and a nine-phase delivery roadmap.

- Designed projects with one-to-many warehouse support and a unified, type-tagged contacts model.

ENGINEERING APPROACH

- Accounting correctness: COGS debit and inventory credit always draw from one cost source, so journal entries stay balanced.
- Single authoritative save path: business logic and journal entries live in model-layer validate and save methods, never bypassed by raw create calls.
- Clear ownership boundaries: each service or component owns one data domain, preventing double-writes and corrupted state.
- Vue reactivity discipline: all state flows through Vue's data layer rather than manual DOM manipulation.

PROFESSIONAL EXPERIENCE

ERP Developer | GILANTA Company, Kigali Aug 2023 – Present

- Develop accounting and inventory modules for a Laravel and Vue ERP used by businesses across Rwanda, including the general ledger, journal entries, and chart of accounts.
- Built the RRA tax engine (VAT and withholding) and the payroll module, with automated expense and payment postings.
- Developed API integrations with Mobile Money and Irembo so digital payments post correctly into the books.
- Work directly with accountants and business owners to debug, reconcile, and validate their books.

Software Engineer & QA | Silver Rwanda IT Professionals Jun 2022 – Mar 2023

- Built and tested business applications with a strong emphasis on data accuracy and reliability.
- Designed and operated backup and recovery procedures to protect business records.

Junior Developer | Solvit Africa Jan 2021 – Mar 2022

- Built web applications in Python using Django, with extensive testing and debugging.

EDUCATION

BSc (Hons), Computer & Software Engineering | University of Rwanda 2019 – 2024

Cybersecurity Training | AfriTech Apr 2023 – May 2024

CERTIFICATIONS

- Cisco Certified Network Associate (CCNA), 2023
- Cisco Certified CyberOps Associate, 2024
